Wikipedia interest: astronomy

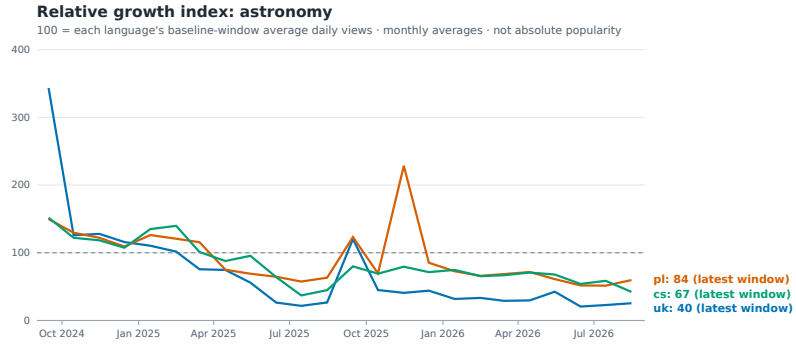
Pageview analysis from Wikimedia data. Pageviews measure article attention, not market demand.

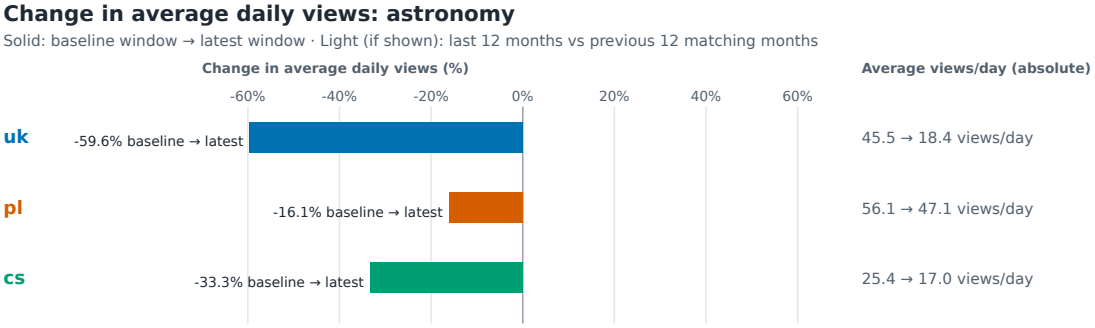
Topic: astronomy (Wikidata Q333)
Languages: uk: Астрономія · pl: Astronomia · cs: Astronomie
Period: 2024-09-01 to 2026-08-31 (730 days, 24 complete months)
Traffic: access=all-access, agent=user

KEY FINDINGS

- uk (Астрономія): average daily views 45.5 → 18.4 (-59.6%); trend down (high confidence); evidence high.
- pl (Astronomia): average daily views 56.1 → 47.1 (-16.1%); trend down (moderate confidence); evidence high.
- cs (Astronomie): average daily views 25.4 → 17.0 (-33.3%); trend down (high confidence); evidence high.
- Largest absolute audience: pl (51.6 average daily views). Absolute views reflect the size of each Wikipedia edition, not only interest in the topic.
- Smallest decline (all compared languages declined) (baseline → latest window): pl (-16.1%; index 83.87).
- Share of each edition's total pageviews (baseline → latest): uk -46.4% (edition traffic -24.6%), pl -8.0% (edition traffic -8.8%), cs -23.8% (edition traffic -12.6%).

CHARTS





CORE METRICS

Lang	Article	Avg/day	Baseline → latest	Change	YoY	Trend (log-linear)	Evidence
uk	Астрономія	32.0	45.5 → 18.4	-59.6%	-59.6%	down -6.5%/mo · high	high
pl	Astronomia	51.6	56.1 → 47.1	-16.1%	-16.1%	down -3.3%/mo · moderate	high
cs	Astronomie	21.2	25.4 → 17.0	-33.3%	-33.3%	down -3.7%/mo · high	high

EVIDENCE STRENGTH: HIGH

- Warning: languages have differently sized audiences; compare relative growth (index) rather than absolute views when judging momentum
- overall strength is the weakest language's (uk: high, pl: high, cs: high)
- uk: 100% of expected daily observations are present; 24 complete months analysed
- pl: 100% of expected daily observations are present; 24 complete months analysed

LIMITATIONS

- Pageviews count page loads, not unique users; one person can generate many views.
- Wikipedia interest is not market demand, purchase intent, revenue potential or willingness to pay.
- News, holidays, school terms, media coverage or links from other sites can cause temporary spikes.
- Language editions have very different audience sizes; compare relative growth, not only absolute views.
- Article quality, length, renaming and search-engine placement differ between languages and affect views.
